More Information

Setup instructions are on the bag. You will need 4 tent stakes (2 to spread the hammock sides, 2 to spread the rain fly/canopy).

The key points to setting up the tent are:

- Center – between the trees or hanging points. The recommended distance between trees is 12' to 25' feet for the Expedition Asym.
- Level - the ridge line should be level once assembled
- Chair Height - the entrance should be chair height for you to sit down (and not hit ground). The farther apart the trees, the higher up on the tree you’ll have to attach your webbing straps.

Care and Maintenance:

Dry and repack damp gear to avoid mildew, mold or color bleeding. To clean, hand wash using mild detergent, warm water rinse and air dry. Inspect for damage after each use. Children under 12 years must be supervised. Do not smoke, cook or light fires inside the hammock. Hammock is guaranteed for one occupant and weight limit of 250 lbs.

Detail of lashing to webbing straps using four figure-8 wraps around main supporting rope and behind webbing strap loops plus 2 half hitches. This is very similar to the figure-8 used when tying a rope to a cleat.
