HT-21	4	18 lb 12 oz	8	A

More Information

HT-21 is the newest replacement in the TEHCC rental equipment - purchased in December 2005 for \$245. It is a BIG 4-person tent in terms of vertical – reaching 6'6" at the peak inside. Floor space is roughly 7' deep by 8' wide, thus four long adult sleeping bags would fit. Pictures posted in different reviews also show two cots with plenty of space in between for gear. This tent would serve as an excellent base camp for hiking or canoeing in an area.

The tent comes in a large dark brown zip bag that will be heavy and quite stuffed. Please read the instructions on the bag before starting to be efficient and avoid damage to the poles. This is a tent you do not want to set up for the first time in the dark or in a hurry. The design uses four flexible snap poles to expand out the nylon walls into a big freestanding box. It will require two people and an area twice the size of the tent. The fitted footprint was purchased in 2009 to continue protecting the bottom of the tent, as this unit is expected to get heavy use like our other big tents. There is a small bag of eight heavy-duty stakes. The corners should be staked as wind will more likely affect this high profile design. There is a zip lock bag with the orange guy lines, but these may only be needed in more windy conditions or to pull out the fly for more air circulation. There is also a repair spool piece for a bent broken pole – provided you packed some duct tape.

Please take the time to make sure the tent is dry, cleaned out, and zippers closed before folding. Pack a small whisk broom and sweep out the tent. It will be a challenge to fit everything into the carrying bag (fold the tent into quarters), but please do so. Finally, remember tents are for sleeping and not an all-day playroom – especially on hot days.
